SUMMARY

UX/UI Designer and final-year ECE student (graduating 2027) specializing in Agent Experience (AX) — the human-centered, user-centered design of interfaces where people and AI systems work together. Skilled across the full product design process: user research, personas, journey mapping, user flows, wireframing, high-fidelity Figma prototyping, design systems, and developer handoff. Five self-built, end-to-end case studies turning multi-agent and AI-native workflows into clear, trustworthy products. Comfortable collaborating cross-functionally and translating research into data-informed, accessible, responsive designs. Seeking a remote UX/Product Design internship or junior role.

SKILLS

UX & Product Design: User-Centered Design, Design Thinking, User Research, User Interviews, User Personas, Journey Mapping, User Flows, Usability Testing, A/B Testing, Heuristic Evaluation, Competitor Analysis, Information Architecture, Interaction Design (IxD), Wireframing, Prototyping, MVP Definition, Design Systems & Component Libraries, UX Writing, Developer Handoff (redlines & specs)

Tools: Figma (Auto-Layout, Component Variants, Interactive Prototyping, Design Tokens), HTML & CSS (basic)

Visual & UI: Typography, Colour Theory, Visual Hierarchy, Layout, Responsive / Mobile-First Design, Accessibility (WCAG)

AI / AX: Agent Experience (AX) Design, Human–AI Interaction, Prompt Engineering, Agentic Workflows (LangGraph, CrewAI), Claude MCP Integrations, AI Trust & Transparency Patterns

Collaboration: Cross-functional Collaboration, Stakeholder Management, Data-Informed Design

EDUCATION

VIT-AP University, Amaravati, AP Expected 2027

B.Tech in Electronics & Communication Engineering

DESIGN PROJECTS & EXPERIENCE

DesignForge AI | *Self-Initiated UX Case Study · Figma*

- Designed a multi-agent design platform of eight specialized AI agents spanning research, personas, user flows, wireframing, UI, accessibility, and critique, consolidating a fragmented workflow into one connected workspace.
- Built human-in-the-loop approval gates and agent-transparency patterns — confidence scores, reasoning summaries, and diff views — to make AI output trustworthy enough to present to stakeholders.
- Increased task efficiency by ~30% across three revision cycles, validated through usability testing with 4 participants, by introducing a sequential pipeline view and relocating approval controls.

InterviewIQ | *Self-Initiated UX Case Study · Figma*

- Designed an AI interview-prep app that generates role-specific questions from a job description and runs realistic voice and text mock interviews.

- Reframed AI scoring as supportive coaching by leading feedback with strengths and pairing each score with a stronger example answer.
- Refined the prep flow over two iteration rounds — adding a score changelog and answer-level shortcuts — by acting on usability feedback from 4 test users.

Synthesis | *Self-Initiated UX Case Study · Figma*

- Architected a research workspace that clusters and connects ideas across multiple documents, addressing a core gap in AI tools that summarize but don't synthesize.
- Designed an AI Confidence UI — a trust layer that flags low-reliability output before users act on it — a pattern absent from comparable tools, identified through competitor analysis.
- Delivered the full research workflow across 5 screens, from drag-and-drop ingestion with AI processing states to citation-linked conversations and a structured export view.

Bite Buddy | *Self-Initiated UX Case Study · Figma*

- Restructured the food-ordering flow to cut steps from discovery to checkout, defining a clearer category structure and navigation hierarchy.
- Built clickable, high-fidelity prototypes in Figma using auto-layout and a shared component library to hold pixel-perfect consistency across spacing, color, and typography.
- Prioritized the highest-friction steps first, refining the ordering journey through iterative usability feedback.

WelthOS | *Self-Initiated UX Case Study · Figma*

- Redesigned a finance-tracking experience to clarify spending patterns and goals for users who struggled to interpret their own data.
- Simplified the information hierarchy by grounding user flows and wireframes in insights from user interviews.
- Prepared developer handoff with redlines and design specs, ensuring visual hierarchy, spacing, and typography translated accurately into build.

CERTIFICATIONS

- **Google UX Design Certificate — Coursera (Google).** Professional certificate covering the end-to-end UX process: user research, wireframing, prototyping, and usability testing.

AWARDS

- **2nd Place — Designathon, GFG VIT-AP Student Chapter (Jan 2026).** Team NEUVAY — recognized for design quality and innovation.
